

## **Rx FOR SUCCESS** Barrett's Esophagus

The esophagus is a muscular tube connecting the throat to the stomach. Barrett's esophagus is a premalignant condition, sometimes leading to adenocarcinoma of the esophagus. Esophageal cancer is rarely curable with a poor five year survival. When Barrett's esophagus is found, periodic endoscopic surveillance is recommended so biopsy can identify dysplasia or pre-cancerous lesions and thereby prevent progression to overt cancer through resection.

Barrett's esophagus is typically found upon endoscopic evaluation of patients with symptoms of heartburn, reflux (back wash of stomach acid irritating the esophagus), or other upper gastrointestinal symptoms. But it can also be found in persons with no symptoms. It is easily recognized visually by a characteristic salmon color. The diagnosis is confirmed at biopsy with the finding of a change in the esophageal epithelium called "intestinal metaphase." The biopsy report will also include whether there is dysplasia present and, if dysplasia is present, whether it is high-grade or low-grade. Cancer risk is highest in those with high-grade dysplasia and lowest in those with no dysplasia. The risk is also higher in those with involvement of a long segment of esophagus as compared to those with short segment involvement. Because Barrett's esophagus is common, the overall risk of cancer is low in persons with short segment involvement and no dysplasia.

If there is no dysplasia, follow-up endoscopy and biopsy are recommended every 3 years. If high-grade dysplasia is present, intense surveillence (every 3 months) is required and possibly surgical resection of the esophagus. Low-grade dysplasia requires yearly surveillance. Barrett's esophagus may be treated with anti-reflux therapy, but there is no clear evidence that medical treatment alters the course of the disorder. Sometimes, surgery is undertaken to prevent reflux.

## **UNDERWRITING CONSIDERATIONS**

Present withouth dysplasia	Non-rated*
Present with history of dysplasia	Decline
History of Barrett's, resolution documented by endoscopy	Non-rated

\*Preferred Best, Preferred Non-Tobacco, Non-Smoker Plus, and Preferred Tobacco not available.

To get an idea of how a client with a history of Barrett's Esophagus would be viewed in the underwriting process, use the Ask "Rx" pert Underwriter on the next page for an informal quote.

If your client has a history of Barrett's Esophagus, please answer the following:			
1. Please list date of first diagnos	is.		
2. Has your client had any of the	following treatments? (If yes, please note date	s.)	
	ate(s))		
3. Are any of the following presen	t (please provide pathology report)?		
□ Dysplasia, low grade□ Dysplasia, high grade			
4. Is your client on any medicatio	ns?		
☐ Yes. Please give details ☐ No			
5. Has your client smoked cigare	tes in the last 12 months?		
□ Yes □ No			
6. Does your client have any othe	r major health problems (e.g., heart disease, e	tc.)?	
☐ Yes. Please give details ☐ No
