Cancer—General Concepts and Terms

Cancer is a general term used to describe any of the multiple types of malignant tumors (neoplasms). Cancer can affect any organ or tissue in the body and is characterized by inappropriate cell growth. One third of all people in the U.S. will develop cancer in their lifetime, and it is second only to cardiovascular disease as a cause of death.

Cancer cells look abnormal under a microscope. They tend to have a large and irregular nucleus that reflects the abnormal cell division and DNA content. The percent of mitotic (actively dividing) cells is roughly proportional to the tumor's rate of growth. Doubling time is a term that refers to the time it takes for a tumor mass to double in size. For a tumor to reach the size of usual clinical detectability (about 1 cm.), it has already undergone approximately 30 doublings to reach 1 billion cells. Only 10 more doubling cycles are needed to produce a tumor burden of 1 kg, which is usually considered to be lethal.

A definite diagnosis of cancer is made by examining the actual abnormal cells under a microscope. This information is present in the APS (attending physician's statement) in the pathology report. Cells are obtained for diagnosis usually by a biopsy. The pathology report is almost always needed by underwriting when evaluating a history of cancer unless the diagnosis was very remote (i.e., > 10 years ago).

The "aggressiveness" of a cancer is referred to as Grade. Grading is determined by the number of cells undergoing mitosis (cell division). The higher the grade, the more rapid the growth of the cancer and the more likely there will be distant spread. Most cancers are graded on a scale of I to IV with Grade I or **well differentiated** being the most favorable and Grade III–IV or **poorly differentiated** having the worst prognosis.

Staging of a cancer refers to the extent of the tumor mass (size and/or spread). The most commonly used staging system is called TNM (T—for tumor size, N—regional lymph node spread, and M—any distant metastasis or spread). A large tumor mass and any spread beyond the original tissue are poor prognostic factors.

Depending on the type of cancer and stage, treatment can include: surgery, radiation or implantation of radioactive substances, chemotherapy, immuno-therapy, and hormonal therapy.

In summary, when underwriting a cancer history, the following factors are important in assessing the risk:

- ▶ Tissue of origin (i.e., colon, prostate, breast, etc.)
- ▶ Grade
- ▶ Stage
- ▶ Time since diagnosis
- ▶ Type of treatment
- ▶ Time since treatment has ended
- ▶ Any recurrences or relapses

To get an idea of how a client with a history of cancer would be viewed in the underwriting process, use the Ask "Rx"pert Underwriter on the next page for an informal quote. Also, please see other issues of the Rx for Success on specific cancers: Prostate Cancer (#15 & #113), Colon Cancer (#24), Breast Cancer (#25), Skin Cancer (#32), Testicular Cancer (#36), Bladder Cancer (#50), Ovarian Cancer (#53), Endometrial (Uterine) Cancer (#60), Cervical Cancer (#62), and Thyroid Cancer (#85).

Ask “Rx”pert Underwriter (Ask Our Expert)

After reading the *Rx for Success* on Cancer, use this form to Ask “Rx”pert Underwriter for an informal quote. Cancer is rated by the organ of origin, the extent of the cancer (Stage) and the length of time since treatment. Please send the pathology and surgical reports.

Producer _____ Phone _____ Fax _____
 Client _____ Age/DOB _____ Sex _____

If your client has had a history of Cancer, please answer the following:

1. Please list type of cancer and date of diagnosis.

2. How was the cancer treated? (Check all that apply.)

- | | |
|---|---|
| <input type="checkbox"/> Lumpectomy | <input type="checkbox"/> Radiation therapy |
| <input type="checkbox"/> Total excision (mastectomy, prostatectomy) | <input type="checkbox"/> Hormonal therapy (tamoxifen, Lupron. etc.) |
| <input type="checkbox"/> Node dissection | <input type="checkbox"/> Stem cell transplant |
| <input type="checkbox"/> Chemotherapy | |

3. Please list date treatment completed.

4. Is your client on any medications?

- Yes. Please give details. _____
 No

5. What stage was the cancer?

- Stage 0 (in-situ) Stage I Stage II Stage III Stage IV

6. Were lymph nodes involved?

- Yes. How many? _____
 No

7. Has there been any evidence of recurrence?

- Yes. Please give details. _____
 No

8. Date and results of last follow up imaging studies and /or lab testing.

9. Has your client smoked cigarettes in the last 12 months?

- Yes No

10. Does your client have any other major health problems (e.g., heart disease, etc.)?

- Yes. Please give details. _____
 No
