Approximately 50 million Americans have or are being treated for high blood pressure by a physician. Blood pressure is the force created by the heart as it pushes blood into the arteries and through the circulatory system. The systolic pressure is the pressure of the blood flow when the heart contracts. The diastolic pressure is the pressure between contractions. Blood pressure is measured in millimeters of mercury ( mmHg ). A typical blood pressure reading for an adult might be 127 systolic/78 diastolic.

- Though an absolute level of elevated blood pressure is not universally accepted as hypertension, most authorities consider sustained systolic pressure over 139 mmHg and/or diastolic pressure over 89 mmHg as excess risk.
Elevated blood pressure indicates that the heart is working harder than normal, putting both the heart and arteries under a greater strain. This may contribute to heart attacks, strokes, kidney failure, and atherosclerosis. If high blood pressure is not treated, the heart may have to work progressively harder to pump enough blood and oxygen to the body's organs and tissues to meet their needs. When the heart is forced to work harder than normal for an extended time, it tends to enlarge. Arteries also suffer the effects of elevated blood pressure becoming scarred, hardened and less elastic. The heart, brain, and kidneys are particularly susceptible to damage by hypertension.
- In 90-95\% of the people with high blood pressure, the cause is unknown. This type of hypertension is called essential or primary hypertension. Even though scientists do not fully understand the causes of high blood pressure, they have developed drugs that are effective over the long term in treating this disease.
- In the remaining cases, high blood pressure is a symptom of a recognizable underlying problem such as a kidney abnormality, adrenal gland tumor, or congenital defect of the aorta. This type of high blood pressure is called secondary hypertension.
When we evaluate applicants with hypertension, we generally consider all blood pressure readings within the past 12 months. We also consider other cardiovascular risk factors such as build, ECG findings, lipid levels (cholesterol), diabetes, and family history. In addition, proper medical care and proper use of prescribed medication are important factors. Generally, individuals whose average blood pressure during the past 12 months fall in the range on the chart below will not be rated.

| AGE | SYSTOLIC | DIASTOLIC |
| :---: | :---: | :---: |
| $18-34$ | 140 | 90 |
| $35-49$ | 150 | 90 |
| $50-69$ | 150 | 95 |
| $70+$ | 160 | 95 |

Blood pressure exceeding these standard levels may be rated based on a hypertensive chart. Good family history, a normal stress electrocardiogram of adequate duration completed within the past year, or a normal echocardiogram can be used to offset blood pressures that are rated.

## Ask "Rx"pert Underwriter (Ask Our Expert)

After reading the Rx for Success on Hypertension, use this form to Ask "Rx"pert Underwriter for an informal quote.
$\qquad$
If your client has a history of high blood pressure, please answer the following:

1. Please list date when first diagnosed.
2. What was the most recent blood pressure reading? (Client may need to contact their physician's office for this information.)
3. Is your client on any medications?
$\square$ Yes. Please give details. $\qquad$
$\square$ No
4. Please check if your client has had any of the following:

| $\square$ Chest pain or coronary artery disease | $\square$ Aneurysm |
| :--- | :--- |
| $\square$ Family history of heart disease, high blood pressure, stroke | $\square$ Diabetes |
| $\square$ Abnormal lipid levels | $\square$ Peripheral vascular disease |
| $\square$ TIA or stroke | $\square$ Kidney disease |
| $\square$ Enlarged heart | $\square$ Overweight |

5. Has your client smoked cigarettes in the last 12 months?
$\square$ Yes
$\square$ No
6. Has a stress electrocardiogram (treadmill test) been completed within the past year?
$\square$ Yes, normal $\qquad$ (Date)
$\square$ Yes, abnormal $\qquad$ (Date)
$\square$ No
7. Has your client ever had an echocardiogram?
$\square$ Yes. Please include a copy. $\qquad$
$\square$ No
8. Does your client have any other major health problems (e.g., cancer, etc.)?
$\square$ Yes. Please give details. $\qquad$
$\square$ No
