

Rx FOR SUCCESS

Polycythemia Vera

Polycythemia Vera (PV) is a chronic, bone marrow disorder characterized by an increase in red cell mass (erythrocytosis) and hemoglobin/hematocrit concentration. Onset is usually after mid-life. Symptoms include weakness, fatigue, dizziness, ringing in the ear, irritability, pain of extremities, headaches, and itching. Thick blood and increased platelet count can lead to clotting, causing strokes and heart attacks. Other complications include neurological symptoms, hypertension, and splenomegaly (enlargement of the spleen).

The diagnosis of PV is considered if the hematocrit is > 52% for males, > 49% for females. Other major criteria are increased RBC mass with an arterial oxygen saturation > 92% and splenomegaly.

Treatment of PV improves symptoms and prolongs life by reducing the incidence of clotting and bleeding. Phlebotomy (withdrawing blood from the vein) is the initial treatment and will control PV for some time. Radioactive phosphorus and alkylating agents (chemotherapy) have been used; however, this form of treatment can lead to leukemia. Hydroxyurea or recombinant interferon is used to lower the platelet count or to reduce splenomegaly. Unresponsive massive splenomegaly may require splenectomy.

Untreated, 50% of symptomatic patients die within 18 months of diagnosis. Persons treated by phlebotomy alone have a survival of 8 to 15 years. Death is usually due to myelofibrosis (bone marrow failure), leukemia, or clotting.

UNDERWRITING CONSIDERATION

PV ABSENT OTHER SIGNIFICANT IMPAIRMENTS	
Untreated	Postpone
Treated with phlebotomy, recent* hemoglobin under 20 g/dL, hematocrit under 55%, platelet count under 750,000 and WBC under 20,000	Class D
If hemoglobin over 20 g/dL, hematocrit over 55, WBC over 20,000, platelet count over 750,000 or treated with splenectomy, hydroxyurea, interferon, radioactive phosphorus, or chemotherapy	Decline
Treated with phlebotomy, after 2 years with normal CBC and platelet count	Class B

*Recent (within 3 months) complete blood count (CBC) including platelet count is required in all cases.

After reading the *Rx for Success* on Polycythemia Vera, use this Ask "Rx"pert Underwriter for an informal quote.

Producer _____ Phone _____ Fax _____
 Client _____ Age/DOB _____ Sex _____

If your client is known to have a history of Polycythemia Vera, please answer the following:

1. Please list date of diagnosis.

2. Please indicate the type of treatment.

- Phlebotomy Splenectomy
 Hydroxyurea Interferon
 Radioactive Phosphorus Chemotherapy

3. What is current therapy?

4. Please provide the date and results of the most recent CBC:

- Hematocrit (Hct) _____
 Hemoglobin (Hb) _____
 Platelet Count _____
 White Blood Cell (WBC) _____

5. Is your client on any medications?

- Yes. Please give date: _____
 No

6. Has your client smoked cigarettes in the last 12 months?

- Yes. Please give date: _____
 No

7. Does your client have any other major health problems (e.g. cancer, etc.)?

- Yes. Please give date: _____
 No
